

TS 5060PMH

Description:

The "TS" unit is designed for pressurized hydraulic- and lubricating systems. This unit can be placed lower than the tank or point of return. It can also handle back pressure from the hydraulic system up to 8 bar.

Typical instalations: Azipods, Thrusters, Sterntube onboard ships. It is also used on all other hydraulic systems. The Purifiner can also be used to purify lubricating systems as well.

The Purifier can be connected directly to the system as a "bypass filtration"

Capacity:	600 liters/24 hour (Single-filter) 1200litres/24H Twin filter))
Olje amount:	Up to 3000 liter (6000L for Twin and 9000L for Triple units)
Olje type:	All hydraulic- and lubricating oils.
Viscosity:	32 - 320
Max pressure inn:	200 bar (With red. Valve) 3BAR as standard
Max Back-pressure:	8bar
Filteruse:	Approx.. 4 filters a year with continual use and normal circumstances.
Power consumption:	2400 watt, 230 volt, 16 amp circuit
Weight :	45 Kg.
Messure:	64x45x47 cm (H x B x D)

Cleaning result after continuous use:

Water: Down to 100 ppm. (0,01%)

Particles: 1-3 micron

NAS class: NAS 3-4
