To whom it may concern

Color Line AS is the biggest ferry company in Norway with seven ships in operation on international routes between Norway and Germany, Denmark and Sweden. Color Magic and Color Fantasy are the two world largest cruise ships, with car decks, they are both operating on the route between Oslo in Norway and Kiel in Germany.

Maintenance is of the greatest importance, in order to achieve stable, safe and reliable operation of the vessel.

For us in Color Line, the maintenance of the hydraulic- and lube oils onboard is of the greatest importance in order to avoid breakdowns and achieve reliable operation of the mechanical equipment onboard.

We have tested several types of by-pass filters and have decided to use the Purifiner filter system from Puradyn. One advantage that we appreciate is that the Purifiner filter system is good for removing solid particles and chemical pollution, like water.

We are following up the oil quality by sending oil samples to our lube- and hydraulic oil supplier once a month for analysis. Feedback from these oil samples shows us that the Purifiner filters are doing a good job with our oils.

Onboard Color Magic we now have five Purifiner filter units in operation on systems like: Stern tube bearings, CCP propellers, bow- and stern thrusters, fin stabilizers, and cargo hydraulic systems.
